Gravity Fill System is ideal for a small number of batteries when a water source is not readily available. The 2.5 gallon gravity fill tank should be placed at least three feet above the battery tops to ensure sufficient water flow.

The Direct Fill Link features a built-in flow indicator and pressure regulator. The pressure sensitive handle reduces pressure down to 10 psi and will handle incoming pressure up to 100 psi. It connects directly to a clean* water source.

*See water purity recommendations

MADE IN THE USA
DISTRIBUTED WORLDWIDE BY
